

Vanguard

GUARD MONITORING

System Overview

The Vanguard system has been designed to monitor the basic functions of a patrolling security guard and in the event that the guard deviates from a laid down procedure, the system will automatically inform a responsible person so that action can be taken.

Each Vanguard System is monitored by our cloud-based servers using the GPRS data network. All signals received are processed and where necessary an alert is sent to control room's using our "On-Line Control Room" system or A Supervisor App. The information, including the controllers action is then up-loaded to the internet where it can be viewed at any time. At approximately 6:00 am our servers scan the data from the previous 24 hours and creates summary and detailed reports that are sent via Email to interested parties.

Main Features

Alerts for the following:

- Patrol not started,
- Missed points,
- Patrolled to quickly,
- Missing Guard,
- MAN Down
- Guards requiring assistance (Supervisor request or Panic).

Extra Features

- Automatic On and Off Duty
- Communication with the guard via "GSM" or "Push To Talk"
- Historical Patrol Routes Displayed using GPS data
- Built in camera
